Security Assessment & Actionable Recommendations

[IPSEC-ENC-001] Weak or forbidden encryption algorithm detected [HIGH] Observed: 3DES Expected: Approved encryption (AES-256-GCM, AES-128-GCM, AES-256-CBC, ENCR_AES_GCM_16, ENCR_AES_CBC) Remediation: Reconfigure IPsec proposals to use strong encryption algorithms such as AES-256-GCM.
[IPSEC-META-003] Static SPI Header Linkability / Session Tracking Risk [LOW] Observed: Observable ESP SPI(s): 0x00001000 Expected: Dynamic SA Rekeying & SPI Rotation Remediation: Ensure frequent Security Association rekeying to prevent passive netflow session correlation.
